DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, 42-54, and 136-145, drawn to a light source disposed within a reflector, whereby a holder moves said light source laterally relative to the axis of the reflector, classified in Class 362, Subclass 287.
 - II. Claims 197-205, drawn to a lighting device detailing electrical circuitry/interconnect, classified in Class 362, Subclass 203.
 - III. Claims 11-41, 55-135, and 146-196, drawn to various lighting devices, such as portable handhelds or flashlights, classified in Class 362, Subclass 188.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not recite the specifics of a holder laterally moving the light source relative to the axis of the reflector. The subcombination has separate utility such as an angularly adjustable or repositionable light source support within a modifier.

Art Unit: 2875

3. Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not recite the specifics of the electrical circuitry/interconnect found in the subcombination. The subcombination has separate utility such as a specific electrical interconnect or switch mechanism within a lighting device.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Conclusion

The separate inventions, as described above, would require multiple and distinct searches, thus, placing an unnecessary burden on the examiner. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason M. Han whose telephone number is (571) 272-2207. The examiner can normally be reached on 8:00am-5:00pm.
